

Lizard Bot - Project Proposal

What We're Building

A Discord bot that monitors text channels and replies "lizard" whenever someone mentions the word "lizard".

Core Features (MVP)

- Monitor multiple text channels simultaneously
- Detect "lizard" in messages (case-insensitive)
- Automatically respond with "lizard"
- Work across different Discord servers
- Basic error handling and logging

Future Enhancements

- Custom trigger words and responses
- Voice channel support with text-to-speech
- Web dashboard for configuration
- Pattern matching for complex triggers
- Usage statistics and analytics

Technical Approach

- **JavaScript** with Node.js
- **Discord.js library** for API integration
- **Modular design** for easy feature additions
- **Cloud hosting** for 24/7 availability
- **Simple file storage** initially, database for scaling

Success Criteria

- Bot maintains consistent uptime
- Responds quickly to trigger words
- Works reliably across multiple servers
- Easy to maintain and update

Potential Challenges

- Discord API rate limiting
- Error handling across different server environments
- Token security and proper permissions management
- Scaling across multiple concurrent servers
